

# Elektronic Ankle Bracelet

## Electronic Monitoring System

The electronic ankle bracelet is a tracking device that can be worn to the ankle for a long time with its ergonomic design and hypoallergenic materials. The installation is carried out with a cord suitable for the ankle by authorized personnel, and the device is switched to active mode.

Attempts such as unauthorized cutting/breaking/stripping off events are recorded with its special cord and multi-sensor design. These events transmitted to the authorized server through the paired unit. Communication is encrypted with unique keys to ensure data security against various manipulations. It supports wireless firmware updates for any feature addition or change. Thanks to its low power consumption, it offers a battery life of up to 2 years.

Bluetooth 5.1

43mm x 69mm x 25mm Body  
Adjustable Size

80 gr. Weight

1000 mA Battery  
Up to 2 Years Use Time

TX Power Up To +20dBm
